Plan

This is Teaching Week 11 of Semester 2 and the teaching block ends this Friday, 7 April.

Your final Inf1-DA tutorial is this week, in which your tutor will return your coursework assignment with marks and feedback.

**But only if you go to the correct tutorial group!**

Find the course web page, Tutorial tab, “group membership” link.

The rest of this lecture includes: a review of exam arrangements; advice on preparation and practice; and a summary of topics covered in the course.

The final lecture, on Friday, will review specific past exam questions.
Informatics 1: Data & Analysis has a single two-hour written examination.

**Date**  Tuesday 16 May 2017  
**Time**  0930–1130  
**Place**  The Pleasance Sports Hall  
**Code**  INFR08015

https://blog.inf.ed.ac.uk/da17/exam#dates

This information is current at 2017-04-03; please check the link above closer to the date to check this and to confirm all of your exams.
Exam: Format

As in previous years, the exam will have three compulsory questions.

- Read all questions before beginning the paper
- You don’t need to do the questions in order
- Don’t assume a question is only using one part of the course
- If you get stuck on one question: don’t waste too much time on it; do go on to the next question; come back later. Don’t give up!

All questions include information about marks available for each section.

Adding up the marks you achieve for each question gives your total mark for the exam, and for Inf1-DA overall.
Exam: Marking

The exam is marked by me together with one or more of the course tutors.

- Marking is anonymous: we don’t see your name or UUN

- All marking is positive: marking starts at zero and goes up for each item successfully completed or partially completed.

- Spelling and grammar are not part of the assessment; although it is important that the markers can read what you have written.

- Marks are not “curved” or “scaled”. You keep all the marks you get.

- There is no ranking — your mark and grade do not in any way depend on how other students do in the course.

See the course web pages for more on exam marking and results.
Exam: Grades

The Inf1-DA exam is graded on the standard University of Edinburgh scale:

<table>
<thead>
<tr>
<th>Mark</th>
<th>Grade</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>70–100</td>
<td>A</td>
<td>Excellent</td>
</tr>
<tr>
<td>60–69</td>
<td>B</td>
<td>Very Good</td>
</tr>
<tr>
<td>50–59</td>
<td>C</td>
<td>Good</td>
</tr>
<tr>
<td>40–49</td>
<td>D</td>
<td>Satisfactory</td>
</tr>
<tr>
<td>30–39</td>
<td>E</td>
<td>Marginal fail</td>
</tr>
<tr>
<td>20–29</td>
<td>F</td>
<td>Clear fail</td>
</tr>
<tr>
<td>10–19</td>
<td>G</td>
<td>Bad fail</td>
</tr>
<tr>
<td>0–9</td>
<td>H</td>
<td>Bad fail</td>
</tr>
</tbody>
</table>

Students who do not pass at this sitting may resit in August.

Passing this course is essential for progression to second-year study.

All passing marks and grades are recorded on your transcript. However, final degree grade is based only on performance in Year 3 onwards.
Exam: Calculators

You may use a scientific calculator in the Inf1-DA exam, and I recommend that you do take one with you.

There is a standard list of permitted calculators, linked from the Inf1-DA web pages.

Most of these calculators perform some algebra, but they are not programmable and do not draw graphs.

If you need a different type of calculator (or other assistive technology) then please do get in touch with either me, your personal tutor, the student disability service, or the ITO.

“The FX-83GT Plus is the UK’s Number 1 Scientific Calculator allowed in every UK exam where a calculator can be used.” — Casio UK
No other electronic devices

You may take in a calculator from the authorised list, but no other devices.

Exam Hall Regulations

9. The use of mobile devices/personal electronic equipment is not permitted. Mobile devices must be switched off during an examination. These should be placed in your bag and should not be on your person.

Mobile devices are those which store/display data or connect to the internet, such as a mobile telephone, smart watches, smart glasses or any other communications equipment.

Take care with this: make sure you do not accidentally carry in any connected device.
The Inf1-DA exam is *closed book* — you may not take in any books, notes, or other reference material into the examination hall.

If you wish to take an English-language dictionary into the exam then please contact the ITO to arrange for permission.

There is no formula sheet or book provided. However, where necessary questions will include tables of critical values or other essential material.

I recommended you write your exam answers in blue or black ink, with diagrams in pencil. However, markers will always work to do their best with whatever is submitted.
Past Exam Papers

Past Questions

All tutorial exercises have Examples and Solutions from past exam papers. These are chosen to match each course topic. Solutions include comments about different possible answers, and notes on important things to include.

Past Papers

The University Library keeps a full set of past papers online.

http://exampapers.ed.ac.uk

For Inf1-DA, the ITO web pages also have sets of sample solutions. In each year there are two Inf1-DA exams, from the main and resit diets. All questions since the 2009 exam are appropriate for the current syllabus.
Using Past Exam Papers

Past papers are a good source of practice material, and I strongly recommend you attempt as many of these questions as you can.

However, please note the following.

- The key exam preparation task is to *master the course material*: understand it and be able to apply it in practice.

  Conveniently, that's also the best possible outcome for you from this course.

- Memorizing the answers to previous questions is not a helpful way to tackle future ones.

- Attempting past exam questions yourself, to test your knowledge, and identify any gaps, is a much more effective way to learn.

If you are puzzled by a past question or the solution provided, ask on *Piazza* or email me directly.
Exam Content

Examinable Material

Unless otherwise specified, all of the following material is examinable:

- Topics covered in lectures
- Directed reading distributed in lectures
- Topics covered in the weekly exercise sheets

All non-examinable additional material in lectures is marked by being on purple-shaded slides with a “+” in the top right-hand corner.

Limits of Computation

Matter organised to provide the greatest possible computing power is fancifully known as computronium.

In the 1960’s Hans-Joachim Bremermann was one of the first people to estimate upper limits to computation.

His Bremermann limit is the computation which could be performed using the earth, over the period of its existence so far.

This is around $10^{93}$ bits of computation.

That’s enough to solve the travelling salesman problem for 300 cities.

But just the once.
Burning Questions

- Will this be on the exam?
- Is this examinable?
- Do I need to know this?
- Is it important?
The entity-relationship model, ER diagrams. The relational model, SQL DDL. Translating an ER model into a relational one. Relational algebra, tuple-relational calculus, SQL queries; translating between all three.

Semistructured data models and the XPath data tree. XML documents. Schema languages and DTDs. Relational data converted into XML. XPath as a query language.

Information retrieval: what it is, evaluating and comparing performance of IR systems; tf-idf; the vector space model and cosine similarity measure.

Summary statistics, population vs. sample; hypothesis testing and $\chi^2$; significance, p-values; correlation does not imply causation.
Some Specific Items

Corpora

In general it is the principles of corpora that are examinable, rather than the precise details of individual corpora. Similarly, you should be familiar with the principles underlying POS-tagging and syntactic annotation, but you do not need to know detailed linguistics or specific tag sets.

You should however, be able to give examples of a corpus or a POS tag.

The CQP tool was used in a tutorial, so is examinable — although again for general principles and use, not every detail of syntax.

Statistics

You are not expected to memorize critical value tables; however, you should be able to use one if provided.

You are expected to know the formulas for the various statistics used, and to be able to calculate with them.
XML and XPath

**XML trees**  Nodes: root, internal, leaves. Parents, children, ancestors, descendants, siblings. XPath node types: root, element, text, attribute.

**XML documents**  Nested start and end tags; text content; tag attributes. Ordering of nodes matters; of attributes doesn’t. Well-formed documents.

**Validation**  Specifying a hierarchy and attribute set. Validating document $D$ against schema $S$. Schema languages, such as DTD.

**XPath navigation**  Path expressions identify a set of nodes. Navigation: axes, node tests, predicates.
Relational Database Modelling

Relational models
- Relations: Tables matching schemas
- Schema: A set of field names and their domains
- Table: A set of tuples of values for these fields

<table>
<thead>
<tr>
<th>uun</th>
<th>name</th>
<th>age</th>
<th>email</th>

ACID Transactions for Reliable Multiuser Databases

Match each letter to its expansion and meaning

A
- Atomicity: A transaction changes just a single value in the database
- Atomicity: A transaction runs either to completion or not at all

C
- Consistency: A transaction always maintains database integrity
- Consistency: A transaction always does the same thing

I
- Isolation: Concurrent transactions act as if done sequentially
- Isolation: Transactions can only affect one table at a time

D
- Durability: A transaction can be reused repeatedly
- Durability: Once complete, a transaction will not be undone
The tuple-relational calculus (TRC) is a mathematical language for expressing queries over a relational database.

**Standard TRC Idioms**

To pick out some tuples from an existing table:

\[
\{ \ R \in \text{Table} \mid \exists S \in \text{OtherTable}, T \in \text{FurtherTable}. \langle Test \rangle \ \}\]

To obtain tuples not directly appearing in any other table:

\[
\{ \ R \mid \exists S \in \text{OtherTable}, T \in \text{FurtherTable}. \langle Test \rangle \ \}\]

In both cases \langle Test \rangle is a Boolean expression using \( R, S, T, \ldots \) and including assertions like \((S.field = R.field) \land \ldots\) to match \( R \) with other records.
Example: Records from Existing Table

All records for students more than 19 years old

\[ \{ S \in \text{Student} \mid S.\text{age} > 19 \} \]

The set of all tuples \( S \) in the table “Student” with field “age” greater than 19.

All records for students taking math1

\[ \{ S \in \text{Student} \mid \exists T \in \text{Takes} \cdot S.\text{uun} = T.\text{uun} \land T.\text{code} = \text{math1} \} \]

The set of all tuples \( S \) in the table “Student” for which there is a tuple \( T \) in “Takes” linking the UUN of \( S \) to course “math1”.
Example: Building New Records

Results for a single course

\[
\{ \ R \mid \exists T \in \text{Takes} . \ T.\text{code} = "math1" \\
\quad \wedge R.uun = T.uun \wedge R.\text{mark} = T.\text{mark} \}
\]

The set of all tuples R where there is a “Takes” tuple T with code “math1” such that R and T have matching UUN and mark.

Students on courses

\[
\{ \ R \mid \exists S \in \text{Student}, T \in \text{Takes}, C \in \text{Course} . \\
\quad S.uun = T.uun \wedge T.\text{code} = C.\text{code} \\
\quad \wedge R.\text{name} = S.\text{name} \wedge R.\text{title} = C.\text{title} \}
\]

The set of all tuples R where there is a “Student” tuple S, a “Takes” tuple T, and a “Course” tuple C with matching UUNs and course codes, and where R takes student name from tuple S and course title from tuple C.
Quite separately from the technical content of your degree studies, the following is an important high-level skill which it’s important that you can demonstrate by the time you graduate. Given a task to be completed:

1. Find the instructions.
2. Read the instructions.
3. Choose from:
   - Either Follow the instructions as directed
   - Or Recognise that you are not following the instructions, and be prepared to address any consequences.

Both of these are viable choices.

Do not underestimate this skill: it is much harder than many expect.
SpaceX Falcon 9 Going Up
SpaceX Falcon 9 Launch Profile

- **Launch**
- **Ascent**
  - First stage has left Earth's atmosphere
- **Stage Separation**
  - Grid gas thrusters flip first stage
- **Flip Maneuver**
- **Boost-Back Burn**
  - Engines light to bring in trajectory toward landing site
- **Grid Fins Deploy**
- **Fairing Separation**
- **Payload Separation**
- **Entry Burn**
  - Engines light again to slow down first stage
- **Aerodynamic Guidance**
  - Grid fins steer lift produced by first stage
- **Vertical Landing**
  - Engines light one final time bringing first stage to precision landing
- **"Just Read The Instructions"**
  - Autonomous Spaceport Drone Ship
SpaceX Falcon 9 Coming Down
The most important rule of every examination ever:

Read The Question

Read the question. Answer the question. Go back and read the question again to make sure you have answered the right question. Repeat.

Don’t be fooled: this is easy to forget. Sometimes you will get it wrong.
Follow These Instructions

- Download the Inf1-DA exam papers from May and August 2016.
- Read the following two questions
  
  May 2016 Question 1
  August 2016 Question 3

  The first of these runs on to a second page.

- Write out answers to both questions.
- Bring your solutions along on Friday.

In the lecture on Friday I shall work through and explain sample solutions for these past questions.
